PLANT SECURITY COMMITTEE MEETING - SEPTEMBER 9, 1954

Present

W. C. Albert
N. F. Black
J. G. Calhoun
T. J. Innes
R. L. McDade
E. G. Miller

1. Request for Photographs from Air Pollution Consultant Discussed
Dr. Albert discussed a request from the Chem. Tech. Laboratories, operated by Drs. Choppin and West of LSU, to take photographs for air pollution studies. This company has been employed by Esso to make these studies. They would like to take photomicrographs of dust samples and motion pictures of air pollution when found in the refinery. The committee agreed to the photomicrographs providing the camera could not be used for other photography. A decision was not made on the use of motion pictures as Dr. Albert did not have enough information on the procedures to be used. Dr. Albert plans to discuss the matter further with Dr. West and to meet with the committee again.
2. Wired Television for Esso Laboratories Gate Costs \$10,100 and Has Estimated Net Return of 27%
Mr. McDade reviewed the Mechanical Engineering design and estimate for the use of wired television to replace a guard at the Esso Laboratories gate. From a security standpoint, the design is satisfactory. Mr. McDade plans to review the economics and if correct, will proceed to obtain approval for the project.
