Subject: Respirator Fit Testing

On 3-9-90 you received a memo from me on this subject. A copy of it is attached for your reference. Also attached is an updated list of employees over-due for respirator fit testing. Per the 3-9-90 memo, these employees may not be assigned to work requiring the use of negative pressure respirators until their fit testing is current. To help insure that this does not happen and that we comply with our Corporate policy on respiratory protection, the following will be accomplished:

1. A list of those not fit tested has been provided to Safety Repair. Safety Repair has been instructed not to issue negative pressure respirators to these employees unless evidence of current fit testing is presented (this evidence is provided to the employee at the time of fit testing).
2. Your supervisor(s) should collect the negative pressure devices issued to employees as an individual use item. Your area safety representative will ensure that this is accomplished.

If you are still in need of fit testing for any of your employees (and there are a few on the list that probably do need testing because of regular respirator use) contact your safety representative or one of the persons listed on the previously mentioned 3-9-90 memo.

There is currently a light duty employee trained to perform fit testing and available at this time. It is not known for how long this person will be available. The routine fit testing program scheduled to begin in mid-April has been put on hold until later this quarter.
