

1 Q About how far could you spray material?

2 A It was usually like four feet.

3 Q Okay. Could you spray it -- I read before
4 in your testimony you could spray it 10 to 12 feet.

5 Would that be about the maximum that you
6 could do?

7 A Yes, yes, you are talking about different
8 sprays.

9 Q Okay. It would differ with -- what kind of
10 material you used would make a difference?

11 A Yes, there would be a difference.

12 Q Okay. Sir, you talked about the 10 percent
13 waste with the plaster.

14 Am I correct that you would have about 25
15 percent waste with the spray product?

16 A Yes, that would be right.

17 Q And you would be spraying it on a beam and
18 rebound off and land on the floor instead?

19 A Yes.

20 Q And you would have to go through a cleanup
21 process with that, also?
