Subject: Data Supporting Alluvial Aquifer Under River

Folks,

By now, most of us have discussed the question whether the alluvial aquifer underlying DuPont Washington Works, WV and Little Hocking Water Association, Ohio extends under the Ohio River (i.e., is contiguous). As you know, this is a key assumption that will be critical to how the system is modeled.

In order to move forward on construction of a new gw model, we are trying to find any/all information that may verify mostly everyone's assumption that the aquifer does extend under the river. I'm writing this note to a broad group of folks in hope that one of you may have a key contact/source for such information.

Thank you for your help.

Andrew
