Dear Jack:

Reference: Harold Browning letter, October 10, 1961

In reference to Mr. Hoopes' letter to you dated November 17th, 1961 on the above subject I agree entirely with the stand taken by Mr. Hoopes.

Very truly yours,

BALDWIN-EHRET-HILL, INC.

New York 17, New York

Dear Jack:

Reference: Harold Browning letter, October 13, 1961

This reference to the elimination of 85% Magnesia Insulation from 8 solicitation MIL- 1-2781C as Grade I, Class h compounded is discriminatory.

Magnesia has done an outstanding job for the Navy and will continue to do so, if allowed. It does have a temperature limitation, however not as high as MIL- 1-2781C, Grade I, Class d. Most manufacturers will guarantee their products to 550° F - some say 600° F.

Long usage, satisfactory performance, ease of application, and competition pricing alone should keep Magnesia in Specifications. Elimination of Grade 1, Class h from MIL- 1-2/810 will not allow the Naval Supply System to order Magnesia when they desire it.

Very truly yours,

Attention Mr. R. C. Parlett

Gentlemen:

A review of Specification MIL-I-2781C indicates that Grade I, Class b compounded insulation (500°F) and Grade II, Class d compounded insulation (750°F) are identical materials except that the latter does not cover 85% magnesia insulation.

It has been proposed, in order to simplify stocking, to place in terminal status and eventually delete Grade I, Class b insulation from the Naval supply system. Those sizes of Grade I insulation which are not presently covered under Grade II, Class d, will be included in the listing of the latter material. Comments have been requested from all Naval Shipyards and Repair Facilities and are expected shortly.

The Association's comments on the above proposal are invited and will be appreciated.

Sincerely yours

/s/ Harold Browning
