TO: R. E. SCHNEIDER

DATE: July 31, 1970

FROM: R. L. BERMAN

SUBJECT: Mono-Mote Job Site Testing

cc: H. A. Brown
Thomas Egan
F. W. Eaton

On July 30, 1970, Mr. Egan contacted me regarding the availability of the field monitors, which were used for the job site testing in Long Island and in Omaha.

The monitors used in Long Island have been cleaned and shipped to the Zonolite General Plant Superintendents for reuse.

The Omaha monitors were obtained. On July 31, 1970, they were delivered to Mr. Ed Peters of the Arthur D. Little Company. Along with the monitors was sent a sheet briefly describing the job which each monitor was used to sample.

The purpose of the delivery was to have Mr. Peters look at the filters under an electronic microscope. He is to use a much higher rate of magnification than the 430X, which is used for our analysis purposes. He is to look for fibers which exist, but cannot be seen at 430X magnification.
