Have you yourself done samples and measured samples of how much asbestos fibers are in the air in garage maintenance facilities?

A Yes. And, also, I sampled actually facilities that produced these linings. When it gets to the end, they have to grind them off as well and measured concentrations there. You can generate some very high dust concentrations.

Q Okay. Now, I would like to show you what is table -- I would like to show you the next page which is 120.

And did the article itself discuss the significance of short fiber chrysotile?

A Yes.

Q And what did it say about the short fiber chrysotile, and what is the significance?

A The significance is this: The method that we still use for counting fibers in the air is called the membrane filter method. It started to be used in about 1970 for regulation.

What it does is collects samples on a filter
