SKIN IRRITATION TEST ON RABBITS

Procedure: Six male albino rabbits were clipped free of hair on the trunk and lateral area and placed in FDA-type stocks. Doses of 0.5 ml undiluted test material were applied to intact skin under 1 1/2" x 1 1/2" 12-ply gauze squares. Rubber sheeting was then loosely wrapped around the trunk and secured with adhesive tape. After 24 hours, the rabbits were removed from the stocks, the patches taken off and the reactions observed. Observations were also made at 48 hours.

Results:

24-Hour Observation

Erythema

Mild 3/6

Slight 3/6

Edema

None 1/6

Slight 4/6

Mild 1/6

48-Hour Observation

Erythema

Mild 1/6

Slight 4/6

None 1/6

Edema

None 6/6

Company Sanitized. Does not contain TSCA CBI

Summary: [REDACTED] used mild to slight skin irritation in 24 hours and mild to no irritation in 48 hours when tested on the shaved intact skin of rabbits.

This material is a mild skin irritant. In the event of skin contact, good industrial hygiene practice would be to wash thoroughly with soap and water.
