

ONE STEP AHEAD

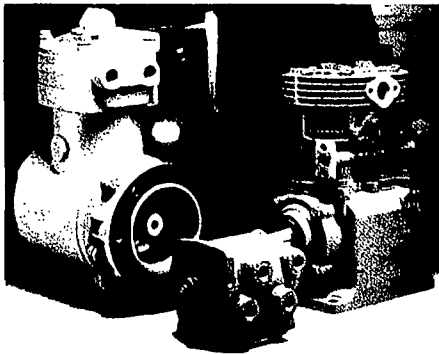

UNITED BRAKE PARTS DIVISION UNVEILS LIKE NU PRODUCT LINE

United Brake Parts Division's new product line, Like Nu, featuring remanufactured heavy duty valves and compressors will be available in January 1989.

Like Nu products are submitted to a rigorous testing process to ensure that they meet O.E.M. specifications. Parts and components that don't completely meet original specifications are replaced with new parts. United backs the products with a superior warranty.

After Like Nu compressors are assembled, they are mounted to a test stand for comprehensive engine simulation testing. This simulation tests them for pressure build-up time, correct oil flow and consumption rates. The oil flow through the compressor and oil consumption past the rings are also monitored. Like Nu compressors meet or exceed federal requirements for build-up time.

Like Nu remanufactured valves undergo a rugged cleaning process before they are assembled with new rubber and brass parts. All originally plated components are replaced to prevent corrosion. Throughout the process of reconditioning and remanufacturing, the valves undergo continual testing so that they meet O.E.M. specifications.

HIGH-PRESSURE LUBRICANT AVAILABLE FROM NAPA ENGINE PARTS

NAPA Engine Cam & Lifter Lube, a high-pressure lubricant, is now available from NAPA Engine Parts. The lubricant is designed for highly-stressed valve train use and to prime oil pump assemblies. It is also used as a cam and lifter lubricant and as a lubricant during engine valve assembly.

NAPA Engine Cam & Lifter Lube adheres to the camshaft and lifters during storage and break-in. It also increases load carrying capacity of engine oil to prevent scuffing and galling between moving parts. In addition, it works on hydraulic, mechanical and roller lifters and can be successfully used for racing applications.

The lubricant comes in a 4.0 oz. bottle dispenser sealed to prevent dirt and contaminants from getting into the container. A convenient 12-bottle carton display for NAPA Engine Cam & Lifter Lube is also available from NAPA Engine Parts.

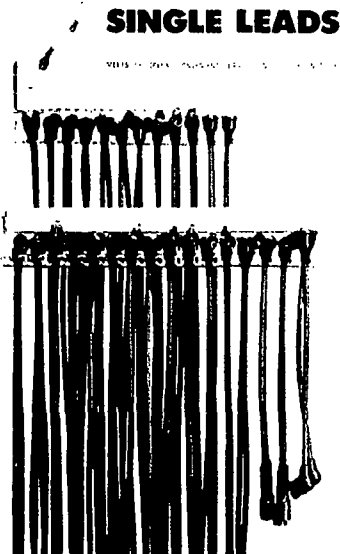

NEW NAPA SILVERLINE SINGLE LEAD PROGRAM COVERS 90% OF THE MARKET

NAPA Belden has introduced its new NAPA SILVERLINE Single Lead Program.

The compact merchandising system features a two-tiered, 18-inch wide display rack. The merchandiser's header cards show descriptive illustrations so your customers can identify their car performance problems.

The Single Lead Program contains leads for 90% of the domestic vehicle market as well as most popular import vehicles. It has both seven and eight millimeter leads which are available in six-inch increments to help you reduce inventory investment. Each of the merchandiser's 36 channels holds up to five leads.

Each durable lead has a specially-formulated rubber jacket which provides dielectric strength. Each also has a core made of acrylic co-polymer coated fiberglass designed to minimize oscillation and to suppress radio frequency interference (R.F.I.) while permitting full power to reach the plugs.

NAPA WINDSHIELD PRODUCTS INTRODUCES WIPER BLADES FOR IMPORTS

NAPA Windshield Products has introduced NAPA Windshield Wiper Blades which are applicable to 98% of the import car and truck market. The replacement blades are built to original equipment specifications and are available in 10 blade lengths from 11 to 21 inches. With them NAPA is now able to offer complete market coverage of import cars as well as for all domestic cars.

NAPA Wiper Blades for import cars have individual adaptors to provide exact fit to original equipment. The blades feature a unique Aerodynamic Perforated Lever Design to reduce wind lift at high speeds and maintain blade strength. They also have a specially formulated rubber wiping element with a precision-trimmed edge which provides clear wiping performance on both forward and backward strokes under all weather conditions.

In addition, the blades have patented knuckles to ensure smooth, quiet operation. The all-steel frame provides outstanding durability and a Weatherable Electrodeposition paint finish ensures the highest degree of corrosion resistance. The blades also feature bridge-type metal vertebra to conform to windshields for a total wipe, plus positive locking clips.

To help make product selection easy for your customers, NAPA Windshield Products offers a display stand to hold the entire import line. The display also includes a pull-out application guide.
