A Yes. He found that the fiber level was far less than what had been in the original material, that in some instances he found no fibers, and in other instances he found a few percent, but generally less than 1 percent fiber was found.

Q I think you mentioned Hackish and Knight.

Did they do similar work?

A Similar in a sense. What Hackish and Knight did, they looked at complete vehicle brake assemblies and did sampling during the replacement of brake linings.

So they did somewhat of a similar-type thing, but they didn't do any work with specimens, and I believe all of their -- the majority of their work was done with optical microscope.

Q Let me ask you this, Mr. Anderson: If Jeremiah Lynch from the Public Health Service and Hackish and Knight from Ford in England had already done these studies, why had you decided to conduct your own?

A There were things that hadn't been
