Subject: APFO Air Modeling Status ☐

I talked with Deb Mulrooney this morning concerning the air modeling of WW APFO emissions. Currently she is waiting on confirmaiton of some additional data from the plant (building heights, stack heights, etc.). She expects to hear back from Chris Shoop by the end of the day today and will be able to run the current state model by Friday. I will then set up a meeting (hopefully for Monday morning) to discuss the results with Ta-Wei and Chris Shoop where we will incorporate current emission reduction plans into the model and identify other actions that may be needed to reduce the off-site concentration. Since the model is fairly easy to run once all the input data is set up, we should be able to analyze a number of different options by the end of the day Monday, August 27th.

Dave, I will get with you on an appropriate pathforward after this session on Monday.

Rob
