

Final Rule Strengthens MATS

- Particulate Matter (PM) standard used as a surrogate for non-mercury HAP metals, and compliance demonstration requirement:
 - Tighter filterable particulate matter (fPM) standard of **0.010 lb/MMBtu**
 - Strengthens by **67 percent** compared to 2012 MATS standard of 0.030 lb/MMBtu
- Require all sources to use PM Continuous Emissions Monitoring Systems (PM CEMS) to demonstrate compliance
 - 0.010 lb/MMBtu is the lowest possible fPM limit where PM CEMS can provide valid and enforceable data
- Mercury (Hg) standard for lignite-fired EGUs
 - Tighter Hg emission standard of **1.2 lb/TBtu**
 - Strengthens by **70 percent** compared to 2012 MATS standard of 4.0 lb/Tbtu
 - 1.2 lb/TBtu is the standard that must be met by all non-lignite-fired EGUs
- Remove startup definition #2
