

**Some people think we should
change our name from
Goldsmith to Silversmith.**

**Because we're headquarters for
silver and silver-base chemicals.**

Our name has never limited our scope.

In fact, since Goldsmith became a division of National Lead Company the breadth of our endeavors has been increasingly enhanced.

Goldsmith is an active participant in National Lead's metallurgical and chemical research and engineering programs.

Our new, fully equipped, expanded facilities utilize the most modern methods for processing silver, its alloys and its chemicals. And have enabled us to meet the demand for products providing higher and more predictable performance . . . of unquestioned quality, purity and uniformity.

Our sales and service offices are located throughout the United States and abroad and are ready to meet your needs for all precious metals and their derivatives. Also indium, cadmium and silver braising products.

We mark our hundredth year in business with pride that so many people have looked to Goldsmith with confidence.

Particularly when they were seeking silver.
