Johns-Manville

Internal Correspondence

To: J. E. Connor - WHQ 2-14

Date: January 31, 1978

From: R. Hattersley - Kingston, MA

Copies: M. D. Webb - JEF
File

Subject: ROGERS CORPORATION
ROGERS, CT

I visited with Carl Welshman, P.A. January 11, 1978. Attached for your review is a copy of their latest published Annual Report.

During a general discussion with Carl, I learned the following:

1. They are using Cassiar AS at their Manchester, CT plant for a specialty, low conductive molding compound.

2. They expect their 7R05 requirement to increase 10 to 15% this year.

3. They use crocidolite at their Rogers plant, for an acid resistance gasket, and at their Manchester plant for phenolic molding compounds.

4. They buy various gasket rolls from Hollingsworth and Vose.
