STATE OF ALABAMA
DEPARTMENT OF PUBLIC HEALTH

DONALD E. WILLIAMSON, M.D. • STATE HEALTH OFFICER

August 1, 1996

Dear Resident:

As you know, we recently investigated the polychlorinated biphenyl (PCB) contamination near the Monsanto Company in Anniston. The purpose of the investigation was to find out the extent of the contamination and any impact on human health. As of June 1996, we have written two reports. If you would like to examine these reports, they will be on file at the Anniston-Calhoun County Public Library, 100 E 10th Street, Anniston, Alabama. Ask for the:

Health Consultation for the Monsanto Company Site,
Anniston, Calhoun County, Alabama,
CERCLIS Number ALD004019048

and/or

Health Consultation for the Cobbtown/Sweet Valley Community
PCB Exposure Investigation Report

Summaries of the second report, the PCB exposure investigation, are enclosed. One summary describes the work that was done on the east side of the plant (Cobbtown/Sweet Valley). Another summary describes the work that was done on the west side of the plant (Four Squares Community).

We plan to present the results of the testing that Monsanto Company is doing in other neighborhoods after the work is finished. Thank you for your help with the investigation and for your patience.

Sincerely,

A handwritten signature in cursive script that reads 'Brian J. Hughes'.

Brian J. Hughes, Ph.D.
Environmental Toxicologist
Division of Epidemiology
