The Soda Springs PCB disposal incident continues. A subpoena for Monsanto Company is expected to be issued shortly. Details of who or what information to be discussed will not be available until the subpoena is served.

The Corporate PCB inventory is essentially complete. Preliminary data tabulation indicates significant progress in MIC as well as the rest of the corporation in managing and disposing of used PCBs and obsolete PCB electrical equipment. Total volume of used PCBs stored for disposal is about 11,000 gallons in 360 containers (of which only 20 are electrical equipment carcasses). Only about 225 pieces of PCB electrical equipment remain in MIC plant sites. Six MIC plant sites are essentially "PCB free sites."
