SUBJECT CALSILITE
Non-Asbestos Meeting June 14, 1971

The following is a review of the points that were discussed at our meeting on June 14, 1971.

1. Firm test sites have been lined up at the following locations:
   a) GAF - Linden, Binghamton and Johnson City - (700 degree - 800 degrees F lines)
   b) Anco Insulation, Tampa, Fla. - 1,000 degrees F line)

   R & D will follow up the GAF plants and Marketing will take care of Anco.
   c) Other 1,000 degrees F test lines are still being negotiated. R & D has stated that successful tests on a maximum 1,000 degrees F line will be sufficient for their approval.

2. Styrothane has placed an order for 5 carloads of Non-Asbestos, but it requires some clarification of sizes and quantities. R. W. Henry and R. Puffett are currently working on this problem. This material is scheduled to be manufactured on June 17, 1971 (approx. 24 hr. run) and it will be shipped on June 21, 1971. The necessary samples for the test lines will come from this run.

3. Government approval for a deviation in the Navy Specification is still far off. R & D is currently working with some Government officials to clarify some minor points.

4. Amosite Fiber order is still on a "hold" basis. Final decision on shipment due July 15, 1971.

5. Hagerstown R & D is preparing some new trails of CALSILITE SS. They have just learned DuPont's process and they are now trying to duplicate it.

6. Next meeting will be held in the 4th floor Conference Room at 10:00 A.M. June 28, 1971.
