227 Irving Avenue,
Port Chester,
N. Y.
Apl. 19th 1922

Dr Cecil K. Drinker,
Harvard University,
Cambridge, Mass.

Dear Sir:

I note in an issue of the "Tribune" dated Apl. 10th 1922 you have been making an exhaustive study of lead poisoning. If there are any published data on your investigations I should be more than glad to obtain them, and would be much beholden to you if you would inform me where I could obtain them. Would it be trespassing too much on your generosity to request your opinion as to whether a tin foil containing 2% of lead used for packing

hard, dry candy, and in direct contact with it could in any way prove injurious to the consumer by assimilating the small quantity of lead that would be removed by attrition against the sweets - and also whether such an alloy would conflict in any way with the Food and Drugs Act? Any information you would be kind enough to give me in regard to this request would be very gratefully received by

Most respectfully yours,

W. W. Rogers
