November 13, 1968

Mr. John S. Geil
Chief Industrial Hygienist
State of Connecticut
State Department of Health
79 Elm Street
Hartford, Connecticut 06115

Dear Mr. Geil:

This is in reply to your letter of November 7, concerning Therminol FR-2.

Therminol FR-2 is biphenyl chlorinated to 48 percent.

Attached is an information sheet, as well as a reprint, which I believe will answer your inquiry.

Although we do not have inhalation data on Aroclor 1248 per se we would expect it to be of the same order of toxicity as Aroclor 1254 and would recommend the same threshold value as for 1254 which is 0.5 mg/cu. meter.

If we may be of further service, please do not hesitate to contact me.

Sincerely,

William H. Hunt, Ph.D.
Toxicologist
