Dear Elmer:

I received a call yesterday from Mr. E. B. Moore, Lever Brothers, Edgewater, N. J. who inquired about the toxic aspects of THERMINOL FR-2 vapors. Lever Brothers has a THERMINOL FR-2 system in Baltimore which contains considerable jacketed pipe and multiple pumps that are subject to leakage. Maintenance workers and operators have complained of headaches and throat irritation from vapor exposure.

I recommended to Mr. Moore that exhaust ventilation be considered in areas of concentrated vapors and that jacketed piping connections be tightened to reduce leakage. Mr. Moore requested that specific information relating to the toxicological hazard from exposure to THERMINOL FR-2 vapors be forwarded to him. Would you please correspond with Mr. Moore and provide the subject information to him?

Mr. Moore's address as follows:

Lever Brothers
Research Center
45 River Road
Edgewater, New Jersey 07020

Thank you for your assistance.

Donald E. Roush
