Lithopone - SKI Formulations

With the recent reductions in the price of zinc and the consequent lowering of the cost on lithopone, we asked Mr. Van Stone for a report as to what the cost would be by increasing the quantity of lithopone in the Super Non-Tone formulations. I am attaching hereto a copy of this report and would appreciate your checking it with Don Kohr to find out whether any advantages or disadvantages result due to such a change. As I understand it, the Chicago factory is to make up some production batches this week on the higher lithopone content. Any further advice as to the correctness of the figures submitted would also be appreciated. I would like an answer on this as soon as possible.
