This memo is to document labeling required for these products to insure plant understanding and compliance.

AROCLOR ELECTRICAL GRADE PRODUCTS

Attached is a copy of Aroclor 1254 Label 826.13-280.11 which includes the clorinated hydrocarbon cautions and the PCB paragraph.

In addition to this label, a waste disposal label 1149/53 must appear on each drum in finished goods inventory until existing label stocks are used. As labels are reordered, these two labels will be combined as shown on the attached Aroclor 1016 label.

INERTEEN LABELS

The copy on Inerteen PPO label 810.92-200.08/53 is the same as used on labels for Inerteen 54201KA, Inerteen 54201CM, Inerteen 100-42 and Inerteen 70-30. In addition to the product label, each finished goods container must carry label 1149/53 on waste disposal until existing label stocks are exhausted and new labels are printed. New labels will take on the format and copy shown for Aroclor 1016. If the reclamation paragraph is to change, please advise!

TRANSFORMER PYRANOL A-13-B 3B

Label 810.97-300.11/53 includes the special GE PCB paragraph. All Pyranol containers must also carry label 1149/53 on waste disposal until all finished goods inventories are exhausted and new labels are printed. New labels will take on the same format and copy illustrated on Aroclor 1016. Bill, if you want us to continue to use the PCB statement GE specify for this product, please advise!

THERMINOL FR SERIES

The attached label is identical to labels for the FR Series, except for product designation. In addition to this label, every container of Therminol FR Series must also contain label 1150/53, calling attention to use limitations. As finished goods inventories and existing label inventories are exhausted, the label will be changed to include this message on the product label as indicated in the attached layout. You will notice that the new label layout does not include reference to waste disposal. It is my understanding that Marketing feel this is unnecessary on the Therminol products. Please advise whether the copy is acceptable or should it be modified to include disposal?
