From	W.M. Sorey	Address	ETC
Subject	Asbestos	Date	02/11/85

Since my memo to you of 1/8/85, I have been asked about non-asbestos insulating material. The ETC stockroom does not have either asbestos or other types of insulating blankets, sheets, or sleeves. The materials presently in use have apparently been brought to ETC from other locations (BRP and Detroit).

In order to facilitate the replacement of asbestos with non-asbestos material, I suggest we begin stocking replacement items as soon as possible. Tubing "socks" or sleeving can be purchased locally. BRP R & D stockroom gets their material from ANCO Insulation in Baton Rouge. In addition, I have attached information from two manufacturers who produce insulating blankets, cordage, sleeving, ropes, and mats.

Perhaps we could get some input from ETC personnel on the sizes and quantities of replacement material needed. We should also provide heavy plastic bags for asbestos collection and disposal and establish a collection point for asbestos similar to what was done recently for waste mercury.

I welcome your suggestions.
