Re: Personnel Monitoring -
Vinyl Chloride

G. Boyd
Central Safety Approved today 25 Feb 82
Note Joe Smith comment Boyer

G. N. Boyd has completed the field comparison of Reiszner badges versus the pump method for determining employee exposure to VCl. The results (attached) show excellent agreement.

I recommend we change to the badge method of monitoring for VCl. The accuracy will be rechecked in three months with standard gas. Also area field comparisons with the pump method should be made every three months.

Your approval is requested.

B. D. Helms
B. D. Helms

Joe Smith agrees.

Committee Agree 25 Feb 82
Should recheck on a hot-humid day
