Mr. Al Phillips
Senior Safety Engineer
Goodyear Tire & Rubber
1144 East Market Street
Akron, OH 44316

Dear Mr. Phillips:

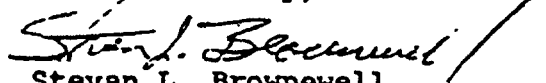

On behalf of my associate, Ms. Clara Goins, and myself, we appreciate your interest and recent inquiry as to how the Division of Safety and Hygiene could be of assistance in providing technical information and/or training for the design technicians of Goodyear Tire & Rubber who need an increased awareness of how to correct and control safety hazards on a machine design while it is being developed on the drawing board. This pro-active approach toward safety is both commendable and efficient in terms of project completion.

Division engineers customarily make survey visits to evaluate machinery for possible guarding recommendations, and where circumstances permit, code exemptions.

Formal training seminars and courses are offered in Columbus at the Ohio Center for Occupational Safety and Health. However, a course specifically tailored toward safety awareness in machine design is not part of the curriculum at the present time.

Per our telephone conversation of August 27, 1990, I am enclosing numerous references and publications which I feel would be essential to the individual responsible for developing a training session on this topic.

Yours in safety,

Steven L. Brownewell
Engineer
