selection of stoker	161	Oil burning	219
self-feeding stoker devices	161	domestic and industrial	219
shaking grates	160	Openings	474
sizes of fuels for dumping grates	160	ventilating	353
stationary grates	161	Operating data on federal buildings	353
stoker installations	161	Ozone	442
types of stokers	161	chemical properties of	442
under-feed stokers	161	deodorizing of	443
use of	162	determining proper concentration of	445
volume of flue gases	162	determining required capacity of	446
Mechanical exhaust	359	germicidal properties of	443
Mechanical ventilating systems, design of	359	industrial uses of	448
Meter		in regard to cold storage	448
Nicholls' heat	14	in ventilation	441
oil	231	physical properties of	441
Methods of drying	449	production of	444
Methods of fan application	380	water purification by	448
Mixtures		Ozone—air mixtures	445
analysis of ozone-air	445	analysis of	445
Moisture content			
calculations	452	Physiological effects	P
explanation of	452	of ventilation	366
Moisture		Pipes	
removal of in saturated air	454	amount of corrosion in	345
amount of steam used	456	area of standard size	128
Mechanical equipment of federal buildings		brass	347
conduit and wiring	351	capacity of	88
costs, boiler and engine room	356	capacity of, at various pressures	90, 91
cost of heating	354	corrosion in	345, 347, 348
cost of maintenance and operation	354	corrosion in copper and brass	347, 348
cost of operating supplies	354	description of, size tables	89, 93, 95, 97
cost of repairs	354, 355	determining, sizes for gravity hot water	128, 129
direct steam radiation equivalent	356	determining the capacity of	98
drinking water	350	effect of composition of iron on corrosion	345
electric plants, data on isolated	354, 355	factors for sizes of, in gravity hot water	129
electric power and light, average and maximum demand for	356	heating	348
elevators	351	fittings	86
employees	353	flow of steam in	247
fire hose	349	heat insulation for, and surfaces	122, 123, 125, 127
fuel rooms	351	method of determining sizes for hot water	345
heating boilers	351	heating systems	95
heating distribution	350	oxygen removal	215
heating requirements	356	per cent difference in capacity of	343
hot water heaters	350	run of and expansion in greenhouse heating	343
illumination	351	systems	347
machinery, charges and depreciation for	356	scale on	343
marine hospital dining rooms	353	scale, removal of	347
marine hospital kitchen equipment	351, 352, 353	sizes and thicknesses of copper and brass	211, 207
marine hospitals	352	sizes of return in central heating systems	344, 346
maximum demand for steam	355	standard dimensions of wrought	343
monthly consumption of steam	355	uniformity of wrought	
operating data on federal buildings	353	Pipe expansion	205, 207
sewers	350	determination of	209, 211
size of water service	350	pipe sizes	
storage tanks	350	Pipe sizes	
ventilation, mechanical	351	central heating system	209, 211
		cold water supply	335, 336
N		description of, tables	89, 93, 95, 96, 97
Natural draft	455	determination of, for steam heating	87
Natural drying	449	for air sealed or closed hot water heating	130
Natural forces in ventilation	471	systems	341
Natural ventilation	471	for hot water systems	335, 336
Natural ventilation		general data on tables	88, 89
application of	482	length of run	87, 92
Nicholls' heat meter	14	one-pipe gravity low pressure steam	96, 100
Noise		pressure drop	87
elimination of	361	principle in determining	335
O		steam heating	87
Office buildings		two-pipe gravity low pressure steam	97, 101
hot water requirements	341	two-pipe gravity vapor systems	102, 103
Oil		two-pipe vapor heating systems	104, 105
domestic fuel	220	unusual conditions in	
traps	309	vacuum pump systems	119, 121
viscosity of	282, 283	Piping	
Oil burner		arrangement of	218
application of automatic control	265, 266	arrangement of in greenhouse heating systems	139
comparative cost figures	226, 227, 229	boiler	347
installation	224	brass	202
natural draft	220	connections for unit heaters	348
operation of burners	223	copper and brass	
types and characteristics	220		

	Page		Page
description of, systems for steam heating	80	determination of size of	114, 115
down-feed system of	80	direct	66
friction in elbows	340	direct-indirect	66
gravity system of	80	effect of enclosures with cast iron, on heat	77, 78
high-pressure systems for unit heaters	202	emission	65, 67, 68, 69
layout	130, 131	effect of painting cast iron	65, 66
one-pipe gravity and vapor systems for unit heaters	202	heat emission of cast iron	72, 73
pressure heads	124	kind of heat emitting units	66
service	87	location and selection of cast iron	66
systems	311	rating of	66
systems for hospital sterilizers	331	recessed	66
systems for laundry, kitchen and hospital	311	semi-indirect	66
equipment	311	specifications for cast iron	78
two-pipe gravity connections for unit heaters	202	temperature drop	118
typical connections	108, 112	useful heat output of	67
up-feed system of	80	Rating	
vacuum system of	202	coal fired boiler	136
vapor system of	80	for fan furnace heating	193
Pitot tubes	364	for gas heating appliances	238, 239
code for the use of	483	gas fired boiler	137
Power requirements		of air cleaners	440
kitchen	324	of boilers for oil fuel	137
Pressure		of industrial unit heaters	198
total	335	Receivers	
water	339	volumetric capacity of	389
Production of ozone	339	Recirculation	361
Proper humidity	378	of air in ventilation	361
Psychological factor in ventilation	361	Refrigerating units	270
Psychrometer	362	application of automatic control	270
Psychrometric chart	372, 375	Refrigeration	
Public buildings	389	cost of	270
unit systems for	389	Registers	
Pumps		free area in warm air	174
air capacities of	295	Relative humidity	377
air test for vacuum heating	296	affect on human comfort	359
automatic condensation and receivers	289	in ventilation	179
boiler feed piston speeds and efficiencies	287, 288	warm air furnace research	
capacities of boiler feed	287	Risers	
capacity of centrifugal	289	branch	80
capacity of receiving tanks	295, 296	effect of reaming	95
condensate of continuously operating	291	water	337
condensation	291, 293	Roof ventilators	
definitions of fittings	303	capacities of unit type	478
definition of terms used	304, 305	continuous type of	480
freely vented air separating tank	299	unit type	474
horse power of motors	305	Room temperatures	362
installation data	305	in ventilation	223
kinds of	287	thermostat	476
lifts	301	Rotary ventilators	
location of receiving tank	295	S	
piston speed of	290	Saturated air	454
piston speed of vacuum heating	295	Schools	
size of steam driven vacuum heating	297	air for ventilation of	358
specifications of	302	unit systems for school work	390
standard equipment of	304	Selecting exhaust fan	567
steam cylinder sizes of reciprocating	298	sensible heat	373
type of drive of vacuum heating	295	Smoke bomb	366
types of	287, 289, 294, 303	Smokes	
typical connections for vacuum heating	299, 300, 301	definition of	433
volumetric displacement rate of vacuum	295	Special problems on drying	456
heating	296	Spray dryers	450
water capacity of vacuum heating	297, 298	Stack	
water cylinder sizes of	297, 298	draft from	162
		function under natural draft operation	162
		ratio of stack area to leader area	172, 173
		size of wall	171
R		Standard method for measuring air	432
Radiant heat	449	velocity	483
Radiation		Standard of the A. S. H. & V. E.	476
amount of, in gas heating	242	Stationary ventilators	
calculation of amount of	74, 75	Steam	
heat, and convection	10, 11	amount used in federal buildings	354
hot water in greenhouses	216, 217	atomizing in industrial oil burning	228
in greenhouse heating systems	215, 216	control of supply in central heating systems	203
proportionate for various room temperatures	74	distribution	87
Radiators		flow of, in pipes	86
automatic control for direct-indirect	263	maximum demand in federal buildings	355
application of automatic control to hot water	264	monthly consumption of, in federal buildings	355
calculation of heat emission of indirect	71, 72	supply connections in kitchens	326
cast iron gravity indirect	71	Steam requirements	
concealed	66	for heating and humidifying air	435
condensation rate in	75, 76	from outside mains	207, 211
design of	66	kitchen	324
