Mr. Monte C. Throdahl
Vice President, Technology
Monsanto Company
800 North Lindbergh Boulevard
St. Louis, Missouri 63166

Dear Monte:

Thank you very much for your call the other day asking if Monsanto can be of additional help in our PCB problem. After looking into it, I find that your people have already been of considerable help and are cooperating in every way we think possible at the moment.

Those who have been working with our Dr. Ed Simons, our lawyers, and our chemists have been Bill Papageorge and Howard Bergen, who, I believe, are in the Customer Relations activities, and Jim Mieure and Robert Kaley from your Analytical Laboratory. Only last week Bob Kaley was in Albany with one of our people helping review the chromatograms being presented as State's evidence. In addition, Bill Papageorge has been particularly helpful in tracking down information on process details that might possibly be relevant to the origin of the dibenzofurans.

Monte, we certainly appreciate all of this fine cooperation and are very grateful for your telephone call. If you see other ways in which you might be helpful, please give me a call. In the meantime, we'll continue to rely on those with whom we are already working.

Best personal regards.

Sincerely,

AMB:m
