

How Much Would it Cost You...

\$5,000

If This Happened to Your TURBINE

\$50,000

● Replacement of turbines is costly... even in the case of minor repairs, labor, parts and downtime costs soon mount up. To go under the assumption that the installation of superheaters in a boiler eliminates the need for purifier protection is dangerous. Particularly during startup and periods of faulty boiler operation such as occurred above, all turbines should have Hi-eF Purifier protection. These high efficiency units assure you of the delivery of cleaner, drier steam of better than 99.95% quality. Write, wire or phone today for information on protecting your steam-using equipment and boilers with Hi-eF Purifier.

Here's the answer

TO SULPHITE BOILER TREATMENT IN A NEAT "PACKAGE"

featuring
HILLS-McCANN
metering
and proportioning
pumps

To meet the power plant engineer's need for an engineered system for treating boiler feedwater, Hills-McCanna now offers a complete "packaged" unit comprising a Hills-McCanna metering pump, solution tank and all auxiliary fittings other than those which are normally carried in stock or are readily available. The system illustrated is for sulphite treatment. Similar packaged units are also available for phosphate treatment. Both systems are available in a wide range of sizes to handle virtually any boiler capacity. Both systems feature tried and proven Hills-McCanna metering and proportioning pumps.

Further information on either the sulphite or phosphate systems will be furnished on request. Literature describing Hills-McCanna metering and proportioning pumps can also be furnished. HILLS-McCANN CO., 2369 W. Nelson St., Chicago 18, Ill.
