BESTWALL JOINT SYSTEM

SGP 0026333

A system of treating end and edge joints of gypsum wallboard with cement and tape. Designed to give smooth, uninterrupted walls with joints as strong as wallboard itself.

SGP 0026334

Using portable electric mixer, workman mixes Bestwall Joint System Cement. Cement may be hand mixed, if desired.

Workman beds Tape with Bestwall Bedding Compound.

First coat of Topping Compound is applied after bedding tape, using 8" knife. Topping Compound or Joint System cement may be used. Workman shears joint finish leaving a perfect feathered edge. Coverage of tape must be dry before additional coats are applied.

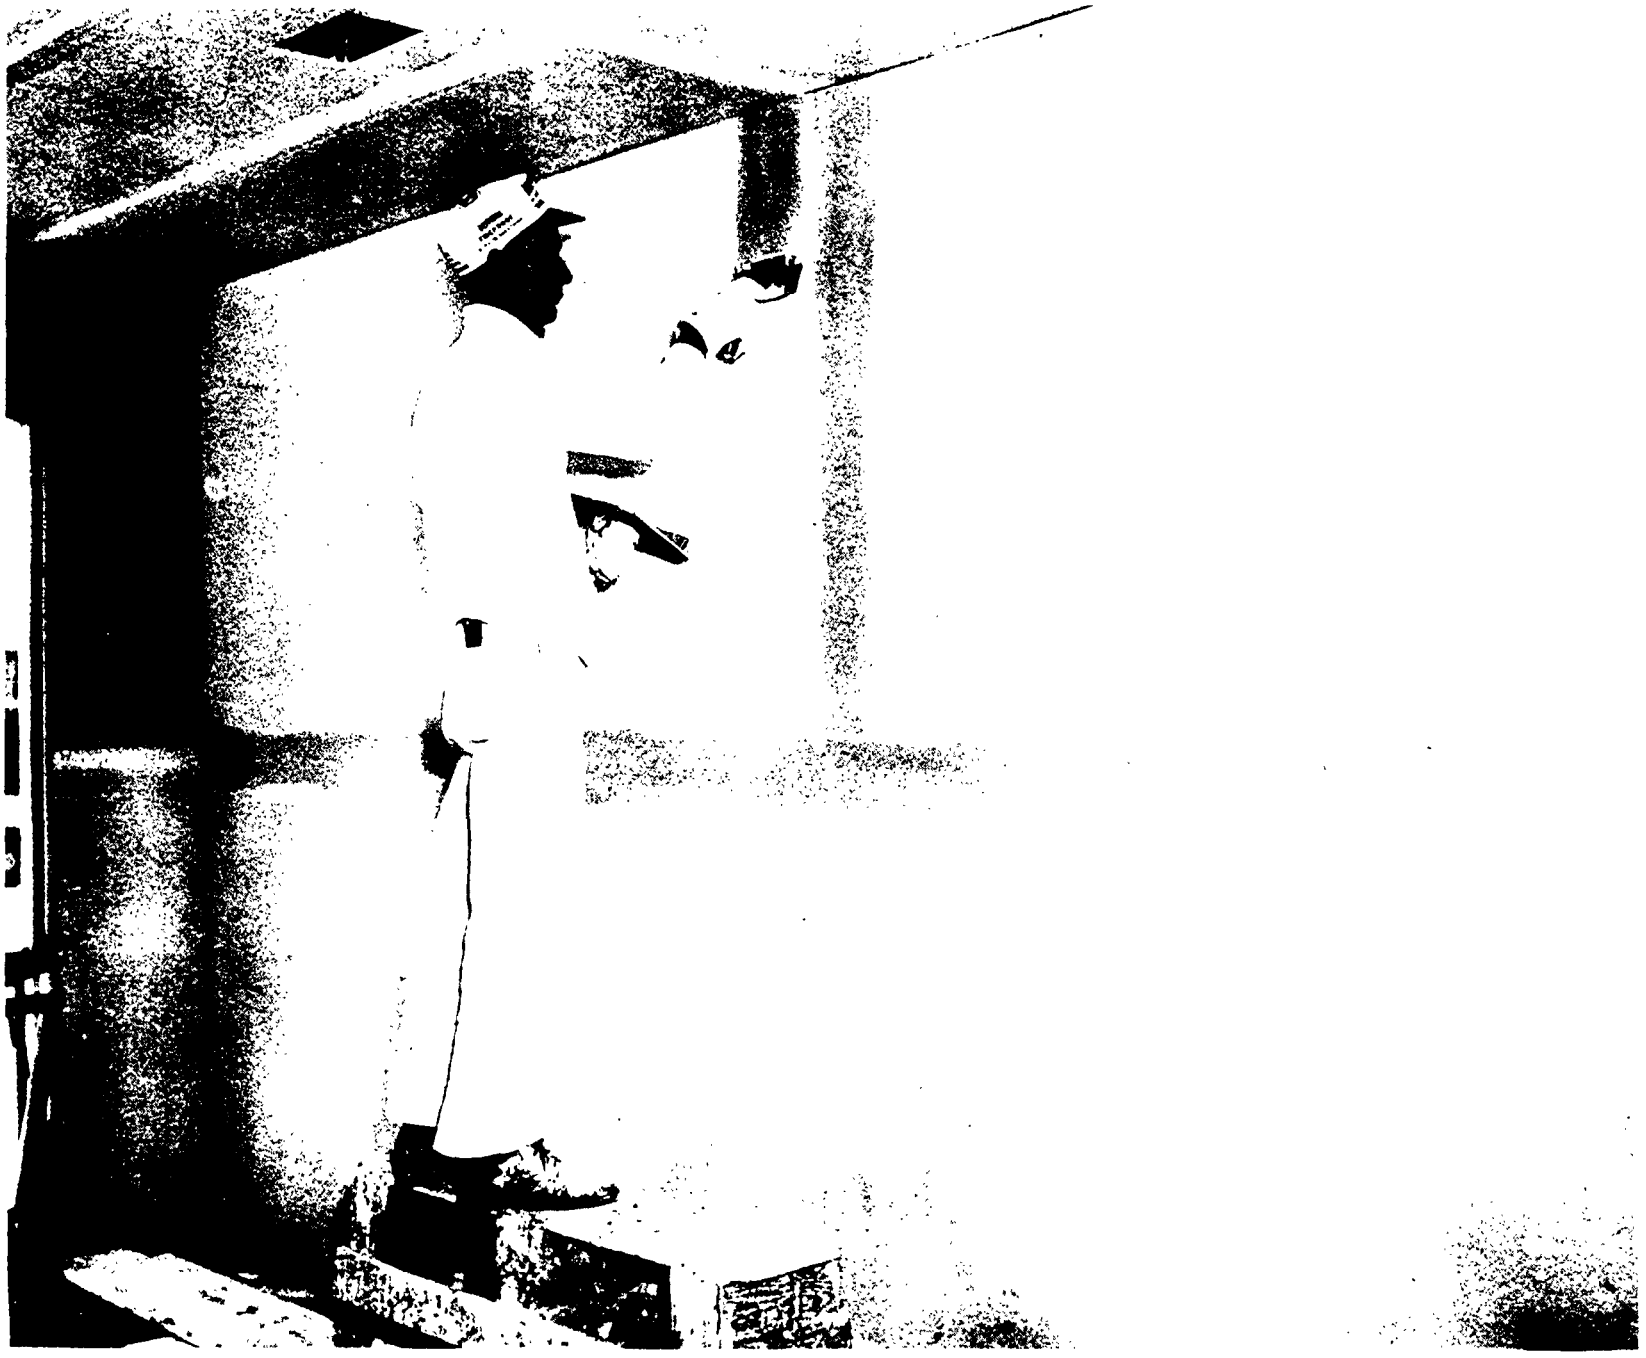

Second application of Topping Compound is sheared with 11" knife.

SGP 0026339

Workman lays back both sides of end joint. End joint was sheared tight before application of tape. After this application dries, joint will be finished.

Workman finishes end joint.

SGP 0026340

Skim coat of Joint System Cement or Topping Compound is applied over board and joint surface, which is sheared off leaving no laps. No sanding is necessary.

SGP 0026341

Workman (at right) shears off Joint Cement or Topping Compound with 11" knife. Other workman loads roller for next run. Skim coating takes the place of the third coat over joints, eliminates sanding and gives more uniform suction.

SGP 0026342

Bestwall Hummer Systems fulfill your need for superior, more enduring gypsum wallboard construction. Performance proven for both new construction and remodeling. Bestwall Hummer Systems and the exclusive Bestwall Joint Systems provide strong, smooth-surfaced walls and ceilings for residential, commercial and industrial interiors. These advanced systems of laminated gypsum wallboard construction are brought to you through Bestwall's continuing creative research.
