

— SIERRA TALC & CLAY COMPANY operates three mills, two in Los Angeles and one in Keeler, Inyo County, California. Its products are hauled by truck from desert and mountain mines, located from nine to 110 miles from the Keeler Mill. Talcs from the east side of Death Valley are brought into Los Angeles by rail.

The company maintains its general offices and complete laboratory at its mill in Los Angeles. It also has mills at 2149 Bay Street, Los Angeles, and its original mill at Keeler, California. Control laboratories are maintained at all three mills.

STEATITE TALCS

FOR HIGH TEMPERATURE CERAMICS

Sierra, with the largest reserve of high grade talc, had the privilege of supplying the bulk of steatite talc during the war, when electronic and spark plug industries were faced with the problem of tremendous increase in production under very rigid specifications on their products. Wartime requirements gave impetus to the development of talcs to be used in all types of cordierite bodies, such as kiln furniture, radiants, cooking ware and sanitary ware.

SIERRA SNOW

Since the end of the war Sierra has continued to produce such talcs on a basis of quality equal to the rigid requirements of war time. Sierra is also producing steatite talcs, with controlled alumina content, to meet the particular needs of each type of product.

Sierra's well-known steatite brands, listed on this page, are held to strict chemical and physical control through years of laboratory and mill experience combined with expert mining knowledge.

Our laboratories are at your service to help solve your particular problems.
