Letter 1

September 25, 1970

Dear Mr. :

Since our recent discussion at your plant on polychlorinated biphenyl (PCB's) environmental pollution, we have been seeking a solution to your disposal problem for scrap Aroclor or transformer askarel.

It now appears our incinerator will not be ready until early 1971. In the mean time, you may ship scrap material for incineration, at your expense, in 55 gal. drums, to the W. G. Krummrich Plant, Sauget, Illinois, Attention Supervisor, Dept. 246. As you know a 3¢ per lb. incineration charge has been established for this service.

Please use the attached label on all drums to be returned. These may be obtained, at no cost, by writing to the Supervisor, Dept. 246, W.G.K. Plant.

Additionally, Rollins Purle Company is operating an incinerator in New Jersey. As soon as Monsanto can inspect this unit and give it our approval, we will negotiate a price for their service. Eventually the Rollins Purle Company hopes to construct similar units in 100 locations through out the United States.

In line with this program we would appreciate your supplying the number of gallons of scrap you expect to generate during 1971 and also a forecast for your 1971 Aroclor or transformer askarel requirements.

Many thanks for your cooperation on this matter. It will help us serve you better.

Cordially,

Randall Graham
Senior Fluids Specialist

PRODUCT NAME

WEIGHT

This product contains polychlorinated biphenyls, which some studies have shown may be an environmental contaminant. Extreme care should be taken to prevent any entry into the environment through spills, leakage, use, disposal, vaporization or otherwise.

CAUTION: Contains chlorinated hydrocarbons. Avoid prolonged breathing of vapors or mists. Avoid contact with eyes or prolonged contact with skin. If skin contact occurs, remove by washing with soap and water. Following eye contact flush with water. If clothing becomes soaked with fluid launder before wearing again.

Mr. Robert S. Crabbe
Director Materials
Aerovox Corp.
Bellville Ave.
New Bedford, Mass.

Dear Mr. Crabbe:

Since our recent discussion at your plant on polychlorinated biphenyl (PCB's) environmental pollution, we have been seeking a solution to your disposal problem for scrap Arocior or transformer askarel.

It now appears our incinerator will not be ready until early 1971. In the mean time, you may ship scrap material for incineration, at your expense, in 55 gal. drums, to the W.d. Krummrich Plant, Sauget, Illinois, Attention Supervisor, Dept. 246. As you know a 3¢ per lb. incineration charge has been established for this service.

Please use the attached label on all drums to be returned. These may be obtained, at no cost, by writing to the Supervisor, Dept. 246, W.G.K. Plant.

Additionally, Rollins Purle Company is operating an incinerator in New Jersey. As soon as Monsanto can inspect this unit and give it our approval, we will negotiate a price for their service. Eventually the Rollins Purle Company hopes to construct similar units in 100 locations through out the United States.

In line with this program we would appreciate your supplying the number of gallons of scrap you expect to generate during 1971 and also a forecast for your 1971 Arocior or transformer askarel requirements.

Many thanks for your cooperation on this matter. It will help us serve you better.

Cordially,

Randall Graham
Senior Fluids Specialist

Additionally, Rollins Purle Company is operating an incinerator in New Jersey. As soon as Monsanto can inspect this unit and give it our approval, we will negotiate a price for their service. Eventually the Rollins Purle Company hopes to construct similar units in 100 locations through out the United States.

In line with this program we would appreciate your supplying the number of gallons of scrap you expect to generate during 1971 and also a forecast for your 1971 Aroclor or transformer askarel requirements.

Many thanks for your cooperation on this matter. It will help us serve you better.

Cordially,

Randall Graham
Senior Fluids Specialist

Mr. Jerry Rowe
P. R. Mallory Co.
Waynesboro, Tenn.

Dear Mr. Rowe:

Since our recent discussion at your plant on polychlorinated biphenyl (PCB's) environmental pollution, we have been seeking a solution to your disposal problem for Aroclor or transformer askarel scrap.

It now appears our incinerator will not be ready until early 1971. In the mean time, you may ship scrap material for incineration, at your expense, in 55 gal. drums, to the W.G. Krummrich Plant, Sauget, Illinois, Attention Supervisor, Dept. 246. As you know a 3¢ per lb. incineration charge has been established for this service.

Please use the attached label on all drums to be returned. These may be obtained, at no cost, by writing to the Supervisor, Dept. 246, W.G.K. Plant.

Additionally, Rollins Purle Company is operating an incinerator in New Jersey. As soon as Monsanto can inspect this unit and give it our approval, we will negotiate a price for their service. Eventually the Rollins Purle Company hopes to construct similar units in 100 locations through out the United States.

In line with this program we would appreciate your supplying the number of gallons of scrap you expect to generate during 1971 and also a forecast for your 1971 Aroclor or transformer askarel requirements.

Many thanks for your cooperation on this matter. It will help us serve you better.
