Mr. J. B. Charm:

Occupational Health - Asbestos

Per your letter of August 27, 1976 on the subject, the South Point plant has reviewed its present position. Asbestos insulation has been used at this facility along with Thermobestos, Magnesia, Superex, Kaylo and Rock Cork to name a few. All new insulation used is asbestos-free.

We have a current list of all CIP's (Carpenter-Insulator-Painters) and Pipefitters who would or could be involved in the removal of asbestos insulation. We also have an annual physical program that is available to all plant employees. We do not at this time require all employees in these work groups to take this physical and request your input on just what procedures we should follow.

It is the plant's opinion that the actual contact with asbestos-type insulation is minimal. Also there is no loose asbestos used at this facility.
