Lead

With a variety of state and local legislation covering lead content in coatings being promulgated the Corporation is moving toward more lead content in our coatings with a temporary allowance of .015% lead when necessary.

Since you supply us with a variety of complete aerosol packages containing various coatings, please determine lead content in these specific packages and advise us of your findings. Examples of the packages I am speaking of are: met:llies, "White Brite", Epoxy Appliance Finishes and American Hardware Sprays.
