ASBESTOS DOCUMENT REVIEW
BY SPECIAL AIHA COMMITTEE

The industrial hygienists (AIHA) appointed a special four-
man committee to review the three basic asbestos documents
which were dealt with at the recent OSHA Hearings in
Washington. Bill Reitz was a member of that committee.

Attached is their report -- all worth reading. You'll note
they recommend keeping the standard at 5 fibers per cc with
peaks to 10. Also, a much modified labeling system. These
sections are marked.

PROPOSED ASBESTOS STANDARD

Attached are three items pertinent to the development of the proposed asbestos standard.

The comments developed and submitted by the American Industrial Hygiene Association. Bill Reitze was a member of the ad hoc committee convened to develop the AIIA position.

A communication from the United Textile Workers of America to the Senate Labor Committee as well as George Guenther supporting in large measure the industry position.

The Bureau of National Affairs coverage of the testimony given at the public hearings in the March 23 issue of the Occupational Safety and Health Reporter.
