SUBJECT Lead Elimination - House Paints

DICTATED BY

This is a reminder to all stockkeepers that the Lead Elimination Program is still scheduled for November 1, 1971.

We have been informed by Coffeyville that they have a sufficient inventory to cover orders holding. Unless additional material is needed, there is no further production planned for Leaded Zinc, code 6C-22-00.

Stockkeepers should review their current inventory and future requirements through November 1 for the following:

1. Additional Leaded Zinc requirements -- if so, requisitions should be placed immediately on Coffeyville.
2. Excess inventory - if current inventories are significantly higher than requirements through November 1, these excesses could be transferred to other locations.
3. Inventories and future requirements approximate each other and neither shortages nor excesses are expected.

Please reply no later than October 6th your respective situation.
