Subject OSHA Medical Exams

Per our discussions I talked to Jim Murray concerning the Subject and how it affects our sales, especially RG-244.

In general he sees nothing wrong with offering to pay "first-time" fines for customers after we have determined that airborne concentrations do not exceed 1 fiber/cc. He estimates our maximum exposure would be $1000 per incident and this is highly improbable. For the low concentrations we have experienced and anticipate, he does not think there would be any fine.

However, Jim does not see any real sales advantage and suggests that we sound out a few "tough nuts" before we try to "legalize" anything. I agree with this approach and suggest that we determine who would be the best potentials to contact with the "offer." The offer would have to be presented only as a possibility until we see how it is received. If there is any interest then we will get Jim to "draw up the papers."
