Describe work operations being performed on and in reference to such materials.

These parts are received partially fabricated from the vendor. They go through secondary press operations and some
are sawed to correct configuration. They are then assembled to base assys. by riveting operation.

Comments: These parts will be replaced by non-asbestos parts by July 1982. Air samples have not been taken on
any of these parts. I will complete air sampling of dust creating operations no later than 2/28/81.
