Dear John:

In the enclosed articles, please note some of the occupations, as to other groups who will become very much interested in this subject, fireproofing or heat insulation, lagging of steam pipes, sheet metal workers and boiler makers, as well as sacking - sorter of sacks.

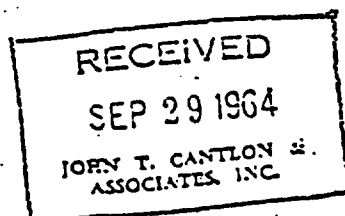

In this later category, I would suggest that you bring this to Dr. Bindley's attention, to exclude the sorting of asbestos material in sacks. You recall he has an older age population, which fall into the higher rates for lung cancer because of age, however, if there is an asbestos exposure, it is going to be very difficult to differentiate between the two.

Incidentally, several cases will be reported in New York of carpenters, exposed to asbestos, who developed cancer of the pleura, besides plumbers previously recorded. In Fowler's article, he refers to a laundry worker and one who cleaned bags in an asbestos factory.

I looked up in the Ohio Manufacturing Directory for lists of plants using asbestos, because I feel that some one should warn them of the potential risk, so that adequate precautions and controls could be instituted. However, they are all very small plants, and may not be concerned, although exposure undoubtedly would be higher. The four digit industrial classification is 3292 and 3293 would identify the names and addresses of all the companies. However, undoubtedly, they miss companies, where it is not a principal product such as Philip Carey. (The directory I have is 1961)

I enjoyed reading your release about your new building - sounds fine -- so in November you will be moving. That will be a great day, somehow your staff ought to have a pre-moving "session", in which it is emphasized that "change" does have certain psychological effects, so that everyone will be patient and tolerant during that trial period. Of course, they have something to look forward to, and be very happy about, so this ought to lessen the strain.

Personal regards,

Thomas F. Mancuso, M.D.
Research Professor

Dear John:

I am enclosing a copy of an Editorial which appeared in the British Medical Journal, July 25, 1964, which has just come to my attention on "Asbestos and Malignancy", and two additional articles on the same subject in the same issue, "Exposure to Asbestos and Mesothelioma of the Pleura" by Fowler et al and "Diffuse Mesothelioma and Exposure to Asbestos Dust in the Merseyside Area" by Owen. The nature of the Editorial and the articles that follow, are focusing increasingly on the relationship of asbestos and cancer. This evidence which will be augmented further during October 19-21 in New York, in the "Conference on the Biological Effects of Asbestos", which is being sponsored by the New York Academy of Sciences. Following this on October 22-24, there will be a series of small meetings of the Working Parties of the International Union Against Cancer, which will work toward developing international cooperation on research, pertaining to asbestos and malignancy.

I should like to call your attention to the fact, that the published data, not only relates to occupational exposures such as occurs in insulation workers, as reported by Selikoff, but to atmospheric pollution, and exposure outside of the work environment, as originally reported by Wagner, and Kiviluoto. Secondly, the article by Truan pertaining to Canada, has been disputed and this no longer represents an adequate or valid appraisal epidemiologically of the situation.

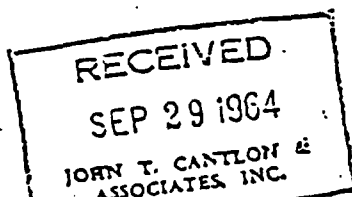

As you can see from these articles, and previously reported investigations, asbestos is being associated with cancer in more than one part of the body, with data showing the lung, pleura, peritoneum as definitely involved, and possibly, the combination of stomach, colon and rectum.

I know that you are very much interested in this subject, and would like to read these articles.

Personal regards,

Thomas F. Mancuso, M.D.
Research Professor

NEW YORK ACADEMY OF SCIENCE CONFERENCE
OCTOBER 19, 20, and 21, 1964, NEW YORK CITY

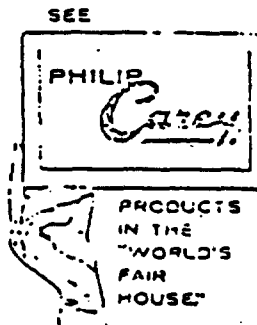

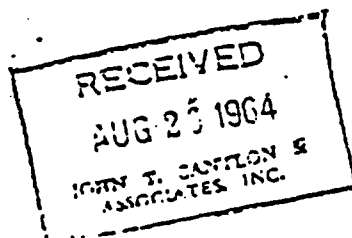

Dear Mr. Cantlon:

I want to thank you for your letter of August 13. We believe much of the information presented at the conference will be highly technical and not applicable to our problems. Therefore, we do not want to send anyone. We also do not believe it is necessary for Dr. Mancuso to digest all of the information developed. As stated in my letter of July 28, we are only interested in obtaining a copy of any material presented at the conference which may be pertinent to our problems.

I still do not know whether a representative of the Asbestos Mining Association will attend the conference. If we secure any information from this source, I will let you know.

Sincerely,

E. J. Fasold
Secretary

Dear Mr. Fasold: New York Academy of Science Conference
October 19, 20, and 21, 1964, New York City

Dr. Mancuso has assured us that he will be willing to digest the information developed at this conference and make it available to us. We in turn will make it available to you.

If you still wish to send someone to this conference, though, we will be glad to make the necessary arrangements through Dr. Mancuso, since attendance is only by special invitation.

The conference, as you know, is directly on the subject of asbestos and the effects of exposure to it.

Yours very truly,

JOHN T. CANTLON & ASSOCIATES, INC.

Dear John:

I was delighted to receive your letter and also the enclosures containing the news release pertaining to the new office buildings. This really looks beautiful and I certainly want to compliment you on this new development and extend my wishes for your continued success.

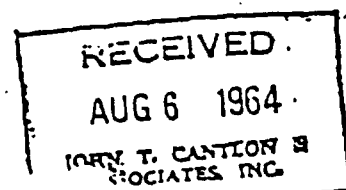

I think the building is very attractive and as I understand it, this location will tie in very nicely with the various expressways. Good luck to you.

I can understand why it would not be practical for you to attend the meeting sponsored by the New York Academy of Sciences on the Biological Effects of Asbestos. I can arrange, I believe, to obtain all the necessary information of any importance to you and your associates and your clients. In any event, I will keep you informed and make sure that you have the latest information on this subject prior to its publication. Personal regards.

Sincerely yours,

Thomas F. Mancuso

Pittsburgh 32, Pa.

Dear Tom:

After careful consideration of my schedule for the next few months I regretfully find that I cannot attend the conference in New York on October 19, 1964.

We are building a new building in Columbus in the Thurber Village Redevelopment area, and copies of newspaper and other articles concerning it have been sent to you for your information.

At the present time, it appears that we will be moving into it in late October and for that reason, I hesitate to be out of town at that particular period.

I did contact Philip Carey about this, and they might be interested in sending a representative, but they ask whether or not you would be in a position to send them a resume of the material presented or a copy of the material presented.

Could you give me any information on this. I assume, of course, that if you did so and it was any particular task, there would be some further remuneration involved.

I am, of course, highly interested in this and hope you will keep me advised of all developments.

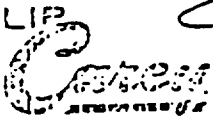

Sincerely yours

John T. Cantlon

Dear Mr. Cantlon:

In Mr. Pechstein's absence I want to thank you for your letter of July 22 and the announcement concerning the conference on the biological effects of asbestos. I am asking our Mine to find out whether the Asbestos Mining Association plans to have a representative at the conference.

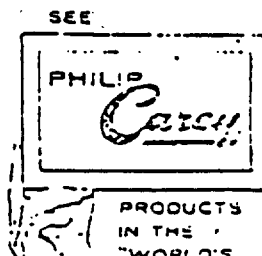

Before deciding on whether we want to send a representative, I would appreciate it if you would ask Dr. Mancuso whether you could obtain a copy of any material presented at the conference which may be pertinent to our problems.

Sincerely,

E. J. Fasold
Secretary

Dear Tom:

Thanks for sending me the application for an invitation to the conference in New York in October.

I am trying to work out now whether or not I can make it, since I would very much like to attend it. I will let you know, as soon as possible.

Sincerely yours,

John Cantlon

PERSONAL AND CONFIDENTIAL

July 22, 1964

Mr. L. A. Pechstein
The Philip Carey Manufacturing Company
Lockland, Cincinnati 15, Ohio

Dear Lou:

Dr. Thomas Mancuso will be actively participating in a conference in New York in October on the biological effects of asbestos. A copy of the form, asking for an invitation, is enclosed.

You will notice his name on the form as one of the directors of the conference committee.

The New York Academy of Sciences is famous, as you may know, for these conferences on various medical aspects, particularly in industrial medicine.

Dr. Mancuso suggested that I attend, but it occurred to me that you may want someone from your company to attend and if so, he possibly could get them an invitation. If you would want me to attend on your behalf, I would be very happy to do so, and we could make some joint arrangements about it.

Yours very truly,

JOHN T. CANTLON & ASSOCIATES, INC.
