COMMENTS:

W,C&D

We continue to supply talc here; as a matter of fact, has an order in with us now that was shipped on the 10th. No problems.

G.E.

Moving along okay here with SM2040. He suggests that we contact Mr. Paul Dartez, the Engineer who would evaluate a high solids material. We did so, and learned that he has done some work with the 60% material from Dow and Union Carbide and has agreed to look at the 50% material both the 100 centistoke and the 350 centistoke material at 50%. Am to send him technical data and material safety data sheets on both products. He is primarily concerned about stability of the compound when mixed at one quarter percent with water. They make 10,000 gallon batches. Isn't particularly interested in the higher centistoke material, example 10,000, because they have trouble getting all the material out of the drum.

cc: Andy Pesez

W.R. GRACE

Ozzie reports that they are buying Daxad 16 and Lomar LS in bulk.
