

December 14, 1938

Dr. A. G. Kammer
Medical Director
Inland Steel Company
East Chicago, Indiana

Dear Doctor Kammer:-

I have your letter of December 6th and although I am very busy, I am very much intrigued with the problem presented by the introduction of lead into steel. Accordingly I should be very glad to make the necessary arrangements to give you my best judgment in connection with any potential hazards in the operation of your plant. I think certain additional studies would be required before I would be justified in giving an opinion. However any further comments can wait until such time as I have had an opportunity to see your plant and to familiarize myself with the problem which presents itself. If you will let me know when would be a suitable time to inspect the plant under operating conditions and to discuss the entire subject, I will make some suitable disposition of my time toward that end.

Cordially yours,

RAK:is

Robert A. Kehoe, M.D.
