PROVAX MACHINERY

The program to introduce low asbestos products is highlighting some improvements desirable in the production equipment. Please assign an engineer to work on this program in conjunction with R. R. Daurilla.

1. Larger pulpers.
2. Increased agitation in holding tanks.
3. Increased agitation in base Mk IV and corrugated.
4. Better water drainage under Mk III.
5. Improved methods of getting accurately dimensioned edges of boards without having to flow material under/over extended backing plate.
6. Reduction of restrictions in machine heads.
7. Improved gauges for all machines.
8. Improvement in volume of air available at machines.
9. Better control on operating pressures.
