Buenos Aires, October 11th, 1945

Doctor Robert A. Kehoe,
Kettering Laboratory of Applied Physiology,
University of Cincinnati,
Cincinnati - OHIO - U.S.A.-

Dear Dr. Kehoe,

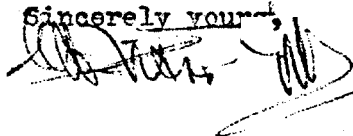

I must apologize for not having written you regarding the question of regulations to be issued by the Public Health Department in the Argentine, to govern the manufacture, blending and distribution of tetraethyl lead. In actual fact, there has been nothing to report up to the present, since I was attempting to have Doctor Pavlovsky appointed to the Committee which is to draw up the regulations. You will be interested to know that after a visit to the Director of Industrial Hygiene, in the Public Health Department, I finally secured his agreement to Doctor Pavlovsky's appointment.

Doctor Pavlovsky will be guided in his discussions by the information which you have sent us, and I will advise you in due course of the outcome of the negotiations.

In connection with your memorandum attached to your letter of April 28th, 1945, Doctor Pavlovsky has asked me for an indication of the frequency of the determination of the rate of lead excretion of representative workers. Obviously, a man cannot be asked to submit excretory samples every day for an indefinite period, and we wonder what procedure is followed in the United States. Would you be good enough to clear up this point?.

I take this opportunity to ask you to be good enough to send me a copy of a publication which you sent to Doctor Pavlovsky entitled "Occupational Lead Exposure and Lead Poisoning" - American Health Association - 1943.

Sincerely yours,

CLRG:ED
