OF NATIONAL SAFETY AND HEALTH
Request for Information on Certain
Chemical Agents

Section 20(a)(6) of the Occupational Safety and Health Act of 1970 (29 U.S.C. 669(a)(6)) directs the Secretary of Health, Education, and Welfare to publish at least annually a list (i.e. the Toxic Substances List) of all known toxic substances by generic family or other useful grouping, and the concentration at which such toxicity is known to occur. Section 20(a)(3) of the Act provides that the Secretary of Health, Education, and Welfare, on the basis of information available to him, shall develop criteria for dealing with toxic substances and section 22(c) authorizes the development of recommended occupational safety and health standards.

The National Institute for Occupational Safety and Health (NIOSH) has identified a set of chemical substances which have reportedly produced an observed or suspected carcinogenic response in animals based upon published articles in the literature. For the purpose of this notice, agents causing benign or malignant tumors are classed as carcinogens. This is because of the possibility that agents which cause benign tumors may also produce malignant effects. This set, a subset from the Toxic Substances List, does not include those carcinogenic chemicals for which NIOSH has already recommended occupational health standards. Data implicating the chemicals set forth below in many cases are inconclusive because of inadequate or questionable studies. Furthermore, the Toxic

Substances List, from which the subset originated, does not include information on the actual availability, use, or manner of exposure to these chemicals, if any, in the workplace. Therefore, NIOSH is publishing this list of chemical substances, and is requesting additional information with respect to those chemicals that will be useful for: (1) further development of the Toxic Substances List, (2) on-going evaluation of the "NIOSH Priority List for Criteria Development for Toxic Substances and Physical Agents," (3) preparation of criteria documents and recommended occupational health standards, (4) conduct of the Health Hazard Evaluation Program (42 CFR Part 85), and (5) assistance in determining occupational health research needs.

The following chemicals are listed alphabetically. Two types of entries are presented. The first type is the prime entry identified by a seven-digit, permanent accession number from the Toxic Substances List file. The first entry also contains the prime name of the chemical using, as applicable, the convention of the "Chemical Abstracts 8th Collective Index" for pure single substances, the Chemical Abstracts Service (CAS) registry number (as available), and synonyms. The second type of entry is the synonym line referencing trivial, common, or trade names to the prime name with its accession number.

Any person having information or data in any of the areas listed below, or in other areas considered relevant to the establishment of a safe and healthful occupational environment involving any of the listed substances, is requested to submit such information identified by the accession number and prime name with accompanying documentation to the

Acting Director, Office of Research and Standards Development, NIOSH, 5600 Fishers Lane (Park Bldg. 3-18), Rockville, MD 20852 within 90 days. The areas of interest include but are not limited to:

1. Production quantities and use and; if the substance is a contaminant, by-product, or intermediate, the major chemical produced and its uses. (Production quantities may be expressed in ranges. Use categories may be general e.g. coating, solvent etc. and should give an indication of worker exposure.)
2. Data on occupational exposure including concentrations and number of persons exposed.
3. Known adverse effects in man or animals including observed or suspected carcinogenic, embryotoxic, teratogenic, and mutagenic effects, and any other toxic effects.
4. Toxicologic, clinical, epidemiologic or industrial hygiene studies in progress or completed, published or unpublished, including positive or negative results.
5. Processes in which the substance is used.
6. Alternatives to the use of a substance that may be available.
7. Analytical and sampling procedures for monitoring the substance in the environment or in biological samples (i.e. blood, urine, tissues, etc.).
8. Work practices for the use, handling, and transportation of the substance.

All information received concerning these substances, except that information which is a trade secret and protected by section 15 of the Act, will be available for public inspection at the foregoing address.

Dated: May 23, 1975.

EDWARD J. BAIER,
Acting Director, National Institute for Occupational Safety and Health.

- AL08750. ACETOHYDROXAMIC ACID, N-2-NAPHTHYL.
SYN: N-ACETYL-2-NAPHTHYLYLHYDROXYLAMINE • N-2-NAPHTHYLACETOHYDROXAMIC ACID
- AL10500. ACETOHYDROXAMIC ACID, N-2-PHENANTHRYL.
SYN: N-HYDROXY-2-ACETYLAMINOPHENANTHRENE • N-2-PHENANTHRYLACETOHYDROXAMIC ACID
- AL12250. ACETOHYDROXAMIC ACID, N-(p-PHENETHYL)PHENYL.
SYN: N-HYDROXY 4-ACETYLAMINOBIBENZYL • N-HYDROXY-4'-PHENETHYLACETANILIDE • N-(p-PHENETHYL)PHENYLACETOHYDROXAMIC ACID
- AL14000. ACETOHYDROXAMIC ACID, N-(4-QUINOLYL).
SYN: MONOACETYL 4-HYDROXYAMINOQUINOLINE • N-4-QUINOLYLACETOHYDROXAMIC ACID
- AL17500. ACETOHYDROXAMIC ACID, trans-N-(p-STYRYL)PHENYL.
SYN: trans-N-HYDROXY-4-ACETYLAMINOSTILBENE
