VISTA

I have attached copies of letters I recently received from Schenectady Chemicals, Inc. and Keller & Heckman notifying Vista that we can use ISONOX 132 antioxidant for production of FDA-allowed resins for rigid applications.

Consistent with HRF's memo of August 14 establishing your group as the clearing house for all FDA-sanctioned products, please proceed with formal steps necessary to permit usage of ISONOX 132 in Aberdeen as detailed in K&H's opinion letter. Aberdeen is anxious to begin using ISONOX 132 across-the-board for resin production.

If you have questions, contact me directly.
