SUBJ: VISTA MATERIAL SAFETY DATA SHEETS

VISTA

Enclosed is a full set (as of 3/1/85) of Vista MSDSs. This set is to be used for reference only. Any distribution of MSDSs should be done according to established procedures to assure that recordkeeping requirements are met. Please be sure others at your location who may need to refer to these MSDSs are aware of the location of them.

When new MSDSs are produced or old ones are revised, you will be sent the appropriate sheets for addition to the set.

SUBJ: LABELING OF PVC WASTE

VISTA

I have discussed your question regarding plant policy to assure compliance with the OSHA VCM STANDARD labeling requirements as they apply to PVC waste (20 CFR 1910, 1017 (L)(3)) with Bill McClain.

After review of the standard, VISTA Polymers practice and the practices of other PVC producers, the following is recommended. We should label PVC waste containers or readily demarcated container areas with the warning specified in the standard. We are under no obligation to label these containers outside of the work place.

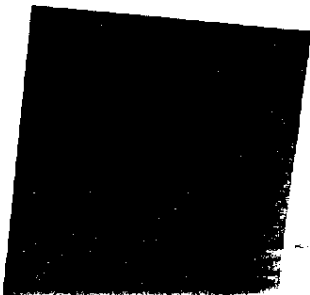

Product liability concerns or other labeling considerations may impact our final decision on this issue. Please call Bill or myself if you wish to discuss this further.
