SUBJ: Nuisance Dust - MONOKOTE Mixing

The following is in response to your memo of November 15th concerning MONOKOTE dust collection systems:

1. As covered in his October monthly report, Feit is meeting with Essick and Thomsen representatives to show them Chaney's dust cover. If there is further interest in adapting this cover to their mixers, they will have to deal with Chaney on rights to the cover.

2. The dust cover is being shipped to Paul, where he will pursue further field evaluations (including air sampling).

3. No contact will be made with Chaney other than through Feit - based on Essick/Thomsen involvement contact will not be necessary.

4. The Pacific Region's action with regards to a larger bag and trailer cleaning are noted without comment.

5. With regards to a stronger bag, this problem has not been noted in other Regions. I suggest we ask Regional Managers and Regional Plant Managers to respond.

6. Assuming that we need to take further steps to eliminate product dust from plant to jobsite, sewn bags would be considered. My own feeling at this time is that we do not need to evaluate this now.
