Manheim, Pa. 17545

Dear Ike:

Enclosed are two copies of a survey on OSHA labeling for our members.

Please look this over. I will not distribute till you give me the go-ahead.

Sincerely,

EWD/lmc
Encs.

Asbestos Study Committee

SUBJECT: Interpretation of OSHA Labeling Requirements

The Chairman of the Asbestos Study Committee is requesting a survey of members on their interpretation of the labeling requirements for asbestos type brake lining and clutch facing shipments.

On June 20, 1972, the Institute distributed to all members a copy of the OSHA Standards for exposure to asbestos dust. A key paragraph in the standards had to do with labeling requirements:

(2) Caution labels--(i) Labeling. Caution labels shall be affixed to all raw materials, mixtures, scrap, waste, debris, and other products containing asbestos fibers, or to their containers, except that no label is required where asbestos fibers have been modified by a bonding agent, coating, binder, or other material so that during any reasonably foreseeable use, handling, storage, disposal, processing, or transportation, no airborne concentrations of asbestos fibers in excess of the exposure limits prescribed in paragraph (b) of this section will be released.

The problem, in this case, is the shipment of asbestos containing brake linings or clutch facings where in many cases subsequent operations will be performed--cutting, grooving, drilling, and grinding. The Chairman indicates that these subsequent operations can produce airborne concentrations of asbestos fibers in excess of the current exposure limits (5 fibers/cc TWA, or 10 fibers/cc ceiling).

The questions are:

1. Do you now label asbestos type friction materials with the label as specified in the OSHA Standards?
 - 1.1 For replacement market shipments?
 - 1.2 For original equipment shipments?
2. Do you plan to label asbestos type friction materials with this label?
 - 2.1 For replacement market shipments?
 - 2.1 For original equipment shipments?
3. Do you interpret the OSHA Regulations on labeling to require a manufacturer to label asbestos type friction materials where subsequent operations (drilling, grinding, etc.) are likely to be performed?

FMSI 06555

Would you please complete this--or have it done by the individual responsible for implementation of the OSHA Standards--and return to me at the Institute Office.

BULLETIN

NO. 457

October 20, 1972

TO: ACTIVE MEMBERS
ASBESTOS STUDY COMMITTEE
LICENSEES

SUBJECT: Occupational Safety and Health Standards (OSHA)

In the October 18, 1972 issue of the Federal Register, the Department of Labor issued a complete set of Rules and Regulations for the OSHA Standards.

As regards asbestos, the section (1910.93a) pertaining thereto is unchanged from that sent to the membership with our Bulletin 442 of June 20, 1972.

The Department published these to bring in all amendments to the standards through September 22, 1972. The purpose was (1) to publish the OSHA Standards fully and reflect changes made during the year, (2) to correct typographical and clerical errors in the original standards, and (3) to publish an index with the standards.

As these full standards are a bulky 250 page issue, it is suggested that members interested in acquiring up-dated standards request them from:

Superintendent of Documents
U. S. Government Printing Office
Washington, D. C. 20402

If interested, order the Federal Register of October 18, 1972, with payment of 20 cents payable to Superintendent of Documents.
