DUTCH BOY *Quick-Drying* **RED LEAD PRIMER**

RUST is a racketeer trying to rob iron and steel unprotected from moisture. But red-lead **STOPS** him.

Dutch Boy Quick-Drying Red Lead Primer is not only a paint that keeps out moisture and stops rust, it is also a time-saver. Under normal drying conditions, you can recoat over Dutch Boy Quick-Drying Red Lead Primer in from 4 to 6 hours, making possible the application of two coats in one day.

No wonder this primer is a top favorite for painting metal when time is a factor... for marine painting where every hour is precious, for automotive equipment which cannot be long out of service, for steel which must be moved rapidly with unusually rough handling and for surfaces around the home for painters who cannot afford to delay the progress of a job. For here is a primer that dries in remarkable time, levels out to an even, uniform surface and a flume lighter to the metal, anchoring the finishing coats firmly and surely.

Here are a few of the many uses for **DUTCH BOY Quick-Drying RED LEAD PRIMER**.

INDUSTRIAL

Refrigeration	Engines
Machinery	Boilers
Pipe lines	Trucks
Refrigeration	Automotive equipment
Storage tanks	Trains
Refrigeration	Hydraulic
Dry docks	Mill work
Coal bins	Structural machinery

AROUND THE HOME

Refrigeration	Ornamental metal
Machinery	Farm implements
Pipe lines	Trucks
Refrigeration	Trains
Dry docks	Mill work
Coal bins	Structural machinery

SAVES METAL from RUST
