RE: BIDCO Cope Seal

This product is used in the molding department as our cope seal. I have been advised that the material contains 40% asbestos make up.

Please make necessary arrangements to replace this product with one containing no asbestos. BIDCO advises that they stock one that should perform well here although it is not quite as flexible. The number is F450 Cope Seal.

Please advise when change has been effected.

A handwritten signature in cursive script, appearing to read "E. S. Monks".
