Original
Capacity Maintained
for the life of the compressor

Due to design and construction, the blades in a Fuller Rotary Compressor automatically compensate for wear, thus eliminating the possibility of loss of capacity. Maintained capacity is just one of the many outstanding features of this machine.

There is no adjustment of valves, no grinding of seats, no take-up of bearings. No multiplicity of parts requiring frequent attention and replacement, all of which means fewer shut-downs, with attendant costly labor charges. Few moving parts: rotor—bearings—blades.

Fuller Rotaries are built for capacities to 3300 c.f.m., actual free-air delivery, pressures to 125-lb. They are fully described and illustrated in Bulletin C-8. May we send you a copy?

CONDENSERS

★ Ingersoll-Rand Manufactures a complete line of surface condensers for power plants. Because of this, the Company is in a position to furnish the size and type exactly suited to your condition. Controlled longitudinal steam distribution, graduated tube spacing, tapering flow path and counter-current type air coolers have helped establish new standards of performance in the condenser field.

Also a complete line of barometric condensers in Disc-Flow and Ejector-Jet types and all condenser auxiliaries.
